For the rest of this document we will use {Your .Client} to refer to the member of the client .matrix determined by the previous procedure. Q: I can not find the symbol "r .string .gcm .defaultsenderid", "R.xml .Global .Tracker", etc. See Addition of the JSON file to get more information. In addition, the rapid start guidelines of most APIs have instructions to generate this file. App / google -services .json src / dogfood / google -services .json src / release / google -services .json ... When processing the JSON file for Android application, the plugin only uses the client object that matches its name Package (for the current compilation type) based on the following logic: For each member of the client .matrix: Check the value of Client .Info / Android .Client .info / package .name If the name of the package matches this value, return the Member object. Below is an example of each file: App / Build / Generation / RES / Google-Services / {Build .Type} / values / values .xml 1: 1035469437089; Android: 7344FB8297B2CD4F
